# TITANIS

Counter Drone Defense System

## TITANIS, FULLY INTEGRATED COUNTER UAS SYSTEM WITH SOFT AND HARD KILL CAPABILITIES

**Countering the threat caused by drones is now a global issue and an increasing concern for the military, government and homeland security forces across every continent. It is expected that unmanned aerial systems (UAS) will be used increasingly for malicious purposes as they can carry cameras, weapons, toxic chemicals and explosives and are being used increasingly for terrorism, espionage and smuggling purposes.**

The Titanis Counter UAS (C-UAS) system was developed by EOS to address the growing threat from malicious and threatening unmanned aircraft systems.

Using robust battle proven technology from best in class sensor and defeat system providers, the Titanis C-UAS capability can counter single drones within 8 seconds of detection out to a range of up to 10 km (6 miles).

The Titanis system is designed to not only defeat single drone threats but also swarm drone tactics recently observed in operational theaters across the Middle East.

The Titanis system detects the drone using state-of-the-art software defined, multi-mission, 4D AESA pulse Doppler radar. It tracks the threat using high precision infrared and daylight cameras and advanced video tracking software, before using a non-kinetic radio frequency (RF) inhibitor to defeat the drone. Should the RF inhibitor not be effective, Titanis switches to hard kill to destroy the drone.

Titanis is built upon field proven sub-systems to detect all types of drones including fixed wing and quadcopters up to 600kg or less (Group 3). EOS is committed to constantly evolving the Titanis capability to respond to new threats and stay ahead in the dynamic UAS countermeasures market. Titanis is a tactical system designed for use by the military, police, other government and non-government agencies for protecting high value critical national infrastructure and personnel.

## TITANIS IS SPECIFICALLY DESIGNED TO MITIGATE THE RISKS CAUSED BY WEAPONIZED DRONES

The rise of the commercial drone markets, combined with the proliferation of military drones has demonstrated the wide range of existing and new potential threats within the C-UAS threat landscape.

### These threats include:

#### Military operations

- Battlefield reconnaissance
- Suicide drones
- SWARM attacks

#### Militant groups exploiting consumer drones for

- Dropping small bombs/IEDs
- Propaganda footage for recruitment videos

#### Drug smuggling

- Prosumer and custom-built drones are being used for international cross border smuggling of narcotics

#### Industrial espionage

- Hostile surveillance by rival manufacturers for reasons of IP theft (vehicle proving grounds and test tracks)
- Breaching secure perimeters for cyber hacking and covert information gathering

#### Untrained users around sensitive areas

- Airports
- Key national sites (administrative buildings: courts, parliaments, etc.)
- Power stations
- Incursions by inquisitive operators
- Unwanted surveillance by paparazzi
- VIP privacy intrusion
- Borders
- Prisons

**Titanis is designed to help mitigate all of the above threats.**

**LESS THAN

# EOS TITANIS DRONE DEFEAT

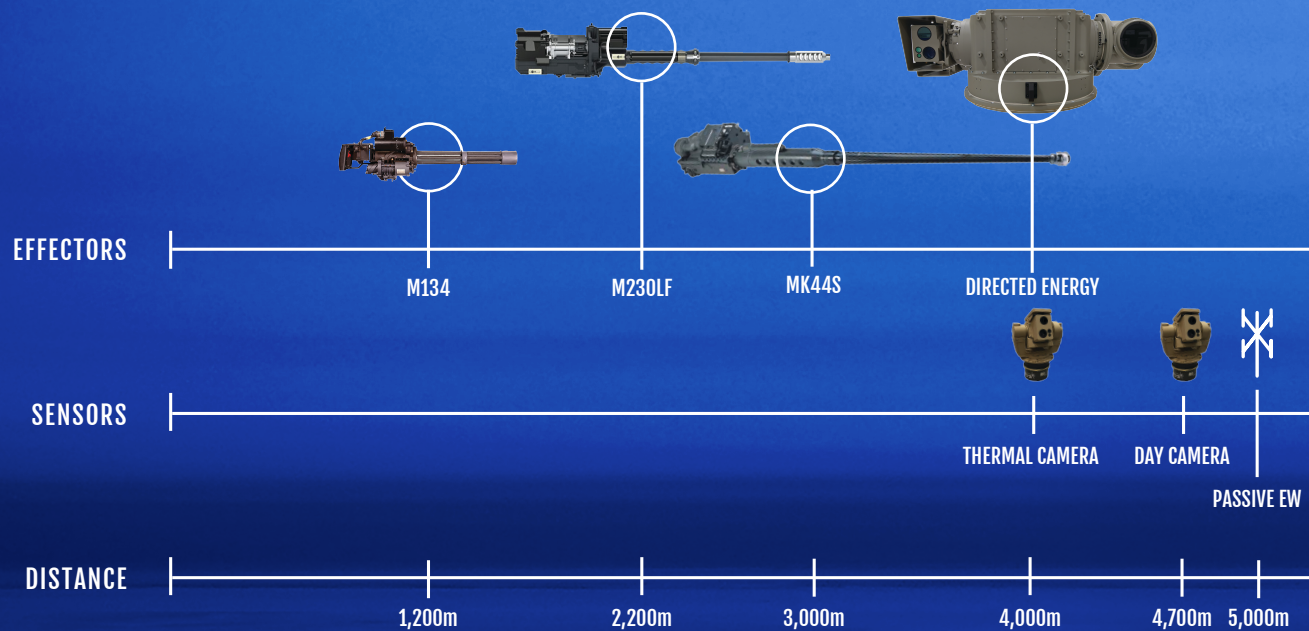

- Integrated command and control
- Integrated soft/hard kill and directed energy effectors
- Swarm defeat capable
- Layered sensor fusion and integration
- Very low false alarm rate
- Fixed and mobile installations
- Protection for facilities, key personnel and mobile forces
- Technology transfer and local production possible
- Locally supportable

30X173MM &  
30X113MM CANNON

# TITANIS DRONE DEFEAT CAPABILITIES

## THE LAYERED SOLUTION TO COUNTER UAS

C-UAS capability is based upon the proven EOS R-Series Remote Weapon Stations (RWS), with directed energy and soft kill capabilities, to provide a layered protection to UAS threats.

The solution enables identification and defeat against UAS targets; with both soft and hard kill capabilities, while providing the ability to operate under protection.

C-UAS capability is based upon the in-service R400 RWS. Through the use of this approach, the cost of introducing the C-UAS capability is reduced, as the training, support and operation are all based upon the legacy RWS.

Hard kill solutions that offer options to reduce fratricide.

Titanis is a scalable layered drone defeat system. The base system sensors include radar, camera and radio frequency detection to complement existing security systems.

Soft/hard kill and directed energy effectors steered by the command and control system offer the full spectrum of defeat solutions to counter threat drone use.

**Radar**

- Pulse Doppler, software-defined radars
- AESA (Active electronically scanned array) antenna, GaN technology
- Extremely high elevation coverage
- Non-rotating, solid state radars
- Digital: beam forming, receivers, pulse compression
- Compact and mobile
- High reliability

**RF Detection**

- Fully compatible with dense urban environments
- High accuracy and long range detection
- Passive detection
- High probability on intercept and zero false alarm rates
- Small footprint and form factor
- Fixed and portable deployments
- Large area coverage
- Swarm target tracking
- Identify UAS operator location

**Hard Kill Effector**

- Concentrated point defense R400 mounting 7.62mm Dillon Aero mini-gun
- R400 mounting M230LF with programmable proximity air bursts
- R800 mounting MK44S with programmable air bursts munitions
- Effective range out to 3000m
- Low collateral damage ammunition options
- Defeat drone swarm tactics

**Soft Kill Effector**

- Defeats – C2, video and / or navigation system
- Effect - land immediately or return to launch point

**Directed Energy Effector**

- 35Kw high power laser
- Minimal collateral damage
- Effective range out to 4000m against Group 1,2,3 drone threats
- Swarm defeat capable with high rates of target engagement
- Transferable technology

**Camera**

- Powerful optic and thermal drone detection and tracking
- Swarm target detection and tracking
- Passive system
